3. GENERAL DATA

3.1 DISPLAY FEATURES

This module is a 8" WVGA of 16:9 format amorphous silicon TFT. The pixel format is vertical stripe and sub pixels are arranged as R(red), G(green), B(blue) sequentially. This display is RoHS compliant, and COG (chip on glass) technology and LED backlight are applied on this display.

| Part Name | TX20D19VM2BAA |
|-------------------------|--|
| Module Dimensions | 189.0(W) mm x 120.0(H) mm x 7.5(D) mm typ. |
| LCD Active Area | 174.0(W) mm x 104.4(H) mm |
| Dot Pitch | 0.0725(W) mm x 3(R, G, B)(W) x 0.2175(H) mm |
| Resolution | 800 x 3(RGB)(W) x 480(H) dots |
| Color Pixel Arrangement | R, G, B Vertical stripe |
| LCD Type | Transmissive Color TFT; Normally White |
| Display Type | Active Matrix |
| Number of Colors | 262k Colors |
| Backlight | 15 LEDs parallel x 3 serial (45 LEDs in total) |
| Weight | (170) g (typ.) |
| Interface | C-MOS; 18-bit RGB; 40 pins |
| Power Supply Voltage | 3.3V for LCD; 12V for Backlight |
| Power Consumption | 990 mW for LCD; 2.16W for backlight |
| Viewing Direction | 12 O'clock (The direction without image inversion and least brightness change) |

| KAOHSIUNG HITACHI ELECTRONICS CO., LTD. | SHEET NO. | 7B64PS 2703-TX20D19VM2BAA-2 | PAGE | 3-1/1 |

4. ABSOLUTE MAXIMUM RATINGS

| | ltem | | Min. | Max. | Unit | Remarks |
|------------------------|--------------------------|------|------|---------|------|----------|
| Supply Voltage | | VDD | 0 | 4.0 | V | - |
| Input Voltage of Logic | | VI | -0.3 | VDD+0.3 | V | Note 1 |
| Operating | Temperature | Тор | -20 | 70 | °C | Note 2 |
| Storage Temperature | | Tst | -30 | 80 | °C | Note 2 |
| LED Backlight | Forward Current | ' IF | - | 35 | mA | Note 3 |
| | Pulse Forward Current | IFP | - | 80 | mA | Note 4 |
| | Reverse Voltage | VR | - | 5 | V | LED unit |

- Note 1: The rating is defined for the signal voltages of the interface such as DTMG, DCLK and RGB data bus.
- Note 2: The maximum rating is defined as above based on the temperature on the panel surface, which might be different from ambient temperature after assembling the panel into the application. Moreover, some temperature-related phenomenon as below needed to be noticed:
 - Background color, contrast and response time would be different in temperatures other than 25°C.
 - Operating under high temperature will shorten LED lifetime.

Note 3: Fig. 4.1 shows the maximum rating of LED forward current against temperature. The backlight unit in this display has been set to 12 mA per LED. This is within the range when operating the display between -20~70°C.

Fig. 4.1

Note 4: Fig. 4.2 and 4.3 show the LED characteristics when using either a DC voltage or PWM to dim the LED backlight.

Fig. 4.3

5. ELECTRICAL CHARACTERISTICS

5.1 LCD CHARACTERISTICS

 $T_a = 25 \, ^{\circ}C, \, \text{VSS} = 0\text{V}$

| Item | Symbol | Condition | Min. | Тур. | Max. | Unit | Remarks |
|------------------------|---------------|-----------|------|------------|------|------|---------|
| Power Supply Voltage | VDD | - | 3.0 | 3.3 | 3.6 | V | - |
| Input Voltage of Logic | | "H" level | 2.0 | - <u>-</u> | VDD | | Note 4 |
| | VI | "L" level | VSS | - | 0.8 | V | Note 1 |
| Power Supply Current | IDD | - | - | 300 | 400 | mA | Note 2 |
| Vsync Frequency | f_{ν} | - | - | 60 | 75 | Hz | - |
| Hsync Frequency | f_{H} | _ | - | 31.6 | 39.2 | KHz | - |
| DCLK Frequency | $f_{\it CLK}$ | - | - | 33.3 | 40 | MHz | - |

Note 1: The rating is defined for the signal voltages of the interface such as DTMG, DCLK and RGB data bus.

Note 2: An all black check pattern is used when measuring IDD, f_v is set to 60 Hz.

5.2 BACKLIGHT CHARACTERISTICS

 $T_a = 25 \, ^{\circ}C$

| Item | Symbol | Condition | Min. | Тур. | Max. | Unit | Remarks |
|---------------------|--------|----------------|--------|--------|--------|------|---------|
| LED Input Voltage | VLED | Backlight Unit | (11.5) | (12.0) | (12.5) | ٧ | Note1 |
| LED Forward Current | ILED | Backlight Unit | _ | 180 | 185 | mA | - |
| LED Lifetime | - | 180 mA | _ | 40K | ı | hrs | Note 2 |

Note 1: Fig. 5.1 shows the LED backlight circuit. The circuit has 45 LEDs in total and R is $249\,\Omega$.

Note 2: The estimated lifetime is specified as the time to reduce 50% brightness by applying 180 mA at 25° C.

Fig. 5.1

6. OPTICAL CHARACTERISTICS

The optical characteristics are measured based on the conditions as below:

- Supplying the signals and voltages defined in the section of electrical characteristics.
- The backlight unit needs to be turned on for 30 minutes.
- The ambient temperature is 25°C.
- In the dark room around 500~1000 lx, the equipment has been set for the measurements as shown in Fig 6.1.

 $T_a = 25 \, ^{\circ}C, f_v = 60 \, \text{Hz}, \text{VDD} = 3.3 \text{V}$

| | | | | | · 1a | $= 23 \text{ C}, f_v$ | = 60 Hz, VDL | 7 = 0.04 |
|-----------------------|-----------|-------------|---|----------------|------|-----------------------|-------------------|----------|
| Item | | Symbol | Condition | Min. | Тур. | Max. | Unit | Remarks |

| | | θ y' | φ = 270°, CR ≥ 10 | (50) | - | - | | |
| | D - 1 | X | | 0.57 | 0.62 | 0.67 | | |
| | Red | Y | | 0.31 | 0.36 | 0.41 | | |
| | _ | X | | 0.30 0.35 0.40 | | | | |
| Color Chromaticity | Green | Υ | | 0.56 | 0.61 | 0.66 | | Note 6 |
| | Dive | Х | $\phi = 0^{\circ}, \theta = 0^{\circ}$ | 0.10 | 0.15 | 0.20 | | |
| | Blue , | Υ | | 0.03 | 0.08 | 0.13 | | |
| | Mhita | Х | | 0.29 | 0.34 | 0.39 | | |
| | White | Υ | | 0.31 | 0.36 | 0.41 | | |

Note 1: The brightness is measured from the center point of the panel, P5 in Fig. 6.2, for the typical value.

Note 2: The brightness uniformity is calculated by the equation as below:

, which is based on the brightness values of the 9 points measured by BM-5 as shown in Fig. 6.2.

| ELECTRONICS CO., LTD. NO. | KAOHSIUNG HITACHI ELECTRONICS CO., LTD. | SHEET NO. | 7B64PS 2706-TX20D19VM2BAA-2 | PAGE | 6-1/2 |
|-----------------------------|--|--------------|-----------------------------|------|-------|
|-----------------------------|--|--------------|-----------------------------|------|-------|

-Note 3: The Contrast ratio is measured from the center point of the panel, P5, and defined as the following equation:

CR = Brightness of White
Brightness of Black

Note 4: The definition of response time is shown in Fig. 6.3. The rising time is the period from 90% brightness to 10% brightness when the data is from white to black. Oppositely, Falling time is the period from 10% brightness rising to 90% brightness.

Note 5: The definition of viewing angle is shown in Fig. 6.4. Angle ϕ is used to represent viewing directions, for instance, $\phi = 270^{\circ}$ means 6 o'clock, and $\phi = 0^{\circ}$ means 3 o'clock. Moreover, angle θ is used to represent viewing angles from axis Z toward plane XY.

The viewing direction of this display is 12 o'clock, which means that a photograph with gray scale would not be reversed in color and the brightness change would be less from this direction. However, the best contrast peak would be located at 6 o'clock.

Note 6: The color chromaticity is measured from the center point of the panel, P5, as shown in Fig. 6.2.

7 BLOCK DIAGRAM

&. RELIABILITY TESTS

| Test Item | Condition | | | |
|-----------------------------|--|--|--|--|
| High Temperature | 1) Operating 2) 70°C | 240 hrs | | |

| Mechanical Shock | 1) Non-Operating 2) 10 ms 3) 50G 4) ±X, ±Y and ±Z directions | Once for each direction | | |
| ESD | 1) Operating 2) Tip: 200 pF, 250 Ω 3) Air discharge for glass: \pm 8KV 4) Contact discharge for metal frame: \pm 8KV 5) Contact discharge for LCD interface: \pm 100V | 1) Glass: 9 points 2) Metal frame: 8 points 3) Connector: all pins | | |

- Note 1: Display functionalities are inspected under the conditions defined in the specification after the reliability tests.
- Note 2: The display is not guaranteed for use in corrosive gas environments.
- Note 3: Under the condition of high temperature & humidity, if the temperature is higher than 40°C, the humidity needs to be reduced as Fig. 7.1 shown.

9. LCD INTERFACE

9.1 INTERFACE PIN CONNECTIONS

The display interface connector is FA5B040HP1R3000 made by JAE (Thickness: 0.3 ± 0.05 mm; Pitch: 0.5 ± 0.05 mm) and more details of the connector are shown in the section of outline dimension.

Pin assignment of LCD interface is as below:

| Pin No. | Signal | Function | Pin No. | Signal | Function | | |
|---------|--------|------------------------|---------|--------|------------|--|--|
| 1 | VDD | | 21 | G4 | Croon Data | | |
| 2 | VDD | Dower Cumply for Logic | 22 | G3 | Green Data | | |
| 3 | VDD | Power Supply for Logic | 23 | VSS | GND | | |
| 4 | VDD | | 24 | G2 | | | |
| 5 | NC | No Connection | 25 | G1 | Green Data | | |
| 6 | DTMG | Timing Signal for Data | 26 | G0 | | | |
| 7 | VSS | GND | 27 | VSS | GND | | |
| 8 | NC | No Connection | 28 | R5 | | | |
| 9 | VSS | GND | 29 | R4 | Red Data | | |
| 10 | (IC) | Note 1 | 30 | R3 | | | |

| 12 | B5 | | 32 | R2 | | | |
| 13 | B4 | Blue Data | 33 | R1 | Red Data | | |
| 14 | В3 | | 34 | R0 | | | |
| 15 | VSS | GND | 35 | (IC) | Note 1 | | |
| 16 | B2 | | 36 | vss | GND | | |
| 17 | B1 | Blue Data | 37 | V 3 3 | GND | | |
| 18 | В0 | | 38 | DCLK | Dot Clock | | |
| 19 | VSS | GND | 39 | Vee | CND | | |
| 20 | G5 | Green Data | 40 | VSS | GND | | |

Note 1: Keep open electrically, Hitachi test use only.

The backlight interface connector is BHR-03VS-1 made by JAE, and pin assignment of backlight is as below:

| Pin No. | Signal | Level | Function |
|---------|--------------------|-------|----------------------|
| 1 | V _{LED} + | - | Power Supply for LED |
| 2 | NC | _ | No connection |
| 3 | V _{LED} - | _ | GND |

19:2 TIMING CHART

DTMG (Data Enable) is the signal to determine valid data, and the timing of DTMG can be determined from Hsync and Vsync as below. For this display, only DTMG and DCLK are the essential signals. Hsync and Vsync are not necessary to connect to display interface after DTMG has been generated and input.

Data is latched by falling edge of DCLK

9.3 INTERFACE TIMING SPECIFICATIONS

| | ltem | Symbol | Min. | Тур. | Max. | Unit |

|--|--------------|-----------------------------|------|-------|--|
|--|--------------|-----------------------------|------|-------|--|

9.4 POWER SEQUENCE

Fig. 9.1

- Note 1: In order to avoid any damages, the correct power On sequence must be followed and VDD have to be applied before all other signals (DTMG, DCLK, RGB data). The opposite is true for power Off where VDD have to be remained on until all other signals have been switch off. The recommended time period is 1 second.
- Note 2: In order to avoid showing uncompleted patterns in transient state. It is recommended that switching the backlight on is delayed for 1 second after the signals have been applied. The opposite is true for power Off where the backlight have to be switched off 1 second before the signals are removed.

9.5 DATA INPUT for DISPLAY COLOR

11. APPEARANCE STANDARD

The appearance inspection is performed in a dark room around 2000 lx based on the conditions as below:

- The distance between inspector's eyes and display is 30 cm.
- The viewing zone is defined with angle θ shown in Fig. 11. The inspection should be performed within 45° when display is shut down. The inspection should be performed within 5° when display is power on.

Fig. 11.1

11.1 THE DEFINITION OF LCD ZONE

LCD panel is divided into 3 areas as shown in Fig.11.2 for appearance specification in next section. A zone is the LCD active area (dot area); B zone is the area, which extended 1 mm out from LCD active area; C zone is the area between B zone and metal frame.

In terms of housing design, B zone is the recommended window area customers' housing should be located in.

Fig. 11.2

_11.2 LCD APPEARANCE SPECIFICATION

The specification as below is defined as the amount of unexpected phenomenon or material in different zones of LCD panel. The definitions of length, width and average diameter using in the table are shown in Fig. 11.3 and Fig. 11.4.

| Item | , | | Cri | iteria | | | Applied zone | |
|-----------------------------------|----------------------|---------------------------------------|----------------|----------------|----------------|---------------|--------------|--|
| | Length (mm) | Width | (mm) | Maximum nu | ımber | Minimum space | | |
| | Ignored | W≦ | 0.01 | Ignored | 1 | - | | |
| , | L≦40 | W≤ | 0.02 | 10 | • | | | |
| 0 | L≦20 | W≦ | 0.04 | 10 | | - | | |
| Scratches | | | Round (I | Oot Shape) | | | Α | |
| l | Average diameter (m | ım) | Maxim | um number | Mìr | nimum space | | |
| | D≦0.2 | | | gnore | | - | | |
| | D≦0.4 | | | 10 | | - | | |
| Dent | | Se | rious one | is not allowed | | | A | |

Note 1: The defi nitions of dot defect are as below:

- The defect area of the dot must be bigger than half of a dot.
- For bright dot-defect, showing black pattern, the dot's brightness must be over 30% brighter than others.
- For dark dot-defect, showing white pattern, the dot's brightness must be under 70% darker than others.
- The definition of 1-dot-defect is the defect-dot, which is isolated and no adjacent defect-dot.

Fig. 11.5

- The definition of adjacent dot is shown as Fig. 11.5.
- The Density of dot defect is defined in the area within diameter ϕ =20mm.

-12. PRECAUTIONS

12.1 PRECAUTIONS of ESD

- 1) Before handling the display, please ensure your body has been connected to ground to avoid any damages by ESD. Also, do not touch display's interface directly when assembling.
- 2) Please remove the protection film very slowly before turning on the display to avoid generating ESD.

12.2 PRECAUTIONS of HANDLING

- 1) In order to keep the appearance of display in good condition, please do not rub any surfaces of the displays by sharp tools harder than 3H, especially touch panel, metal frame and polarizer.
- 2) Please do not stack the displays as this may damage the surface. In order to avoid any injuries, please avoid touching the edge of the glass or metal frame and wore gloves during handling.
- 3) Touching the polarizer or terminal pins with bare hand should be avoided to prevent staining and poor electrical contact.
- 4) Do not use any harmful chemicals such as acetone, toluene, and isopropyl alcohol to clean display's surfaces.
- 5) Please use soft cloth or absorbent cotton with ethanol to clean the display by gently wiping. Moreover, when wiping the display, please wipe it by horizontal or vertical direction instead of circling to prevent leaving scars on the display's surface, especially polarizer.
- 6) Please wipe any unknown liquids immediately such as saliva, water or dew on the display to avoid color fading or any permanently damages.
- 7) Maximum pressure to the surface of the display must be less than 1.96×10^4 Pa. If the area of adding pressure is less than $1 \, \text{cm}^2$, the maximum pressure must be less than 1.96×10^4 Pa.

12.3 PRECAUTIONS OF OPERATING

- 1) Please input signals and voltages to the displays according to the values defined in the section of electrical characteristics to obtain the best performance. Any voltages over than absolute maximum rating will cause permanent damages to this display. Also, any timing of the signals out of this specification would cause unexpected performance.
- 2) When the display is operating at significant low temperature, the response time will be slower than it at 25 °C. In high temperature, the color will be slightly dark and blue compared to original pattern. However, these are temperature-related phenomenon of LCD and it will not cause permanent damages to the display when used within the operating temperature.
- 3) The use of screen saver or sleep mode is recommended when static images are likely for long periods of time. This is to avoid the possibility of image sticking.
- 4) Spike noise can cause malfunction of the circuit. The recommended limitation of spike noise is no bigger than ± 100 mV.

| KAOHSIUNG HITACH | 11 |
|---------------------|-----|
| ELECTRONICS CO., L1 | ۲D. |

-12.4 PRECAUTIONS of STORAGE

If the displays are going to be stored for years, please be aware the following notices.

- 1) Please store the displays in a dark room to avoid any damages from sunlight and other sources of UV light.
- 2) The recommended long term storage temperature is between 10 °C ~35 °C and 55% ~75% humidity to avoid causing bubbles between polarizer and LCD glasses, and polarizer peeling from LCD glasses.
- 3) It would be better to keep the displays in the container, which is shipped from Hitachi, and do not unpack it.
- 4) Please do not stick any labels on the display surface for a long time, especially on the polarizer.

12.5 MOUNTING PRECAUTION

- 1) When assembling the LCM Module, please refer to the below.
- 2) The use of cushion is recommended in order to protect the module from shock.

_13. DESIGNATION of LOT MARK

1) The lot mark is showing in Fig.12.2. First 4 digits are used to represent production lot, T represented made in Taiwan, and the last 5 digits are the serial number.

2) The tables as below are showing what the first 4 digits of lot mark are shorted for.

| Year | Mark |
|------|------|
| 2008 | 8 |
| 2009 | 9 |
| 2010 | 0 |
| 2011 | 1 |
| 2012 | 2 |

| Month | Mark | Month | Mark |
|-------|------|-------|------|
| 1 | 01 | 7 | 07 |
| 2 | 02 | 8 | 08 |
| 3 | 03 | 9 | 09 |
| 4 | 04 | 10 | 10 |
| 5 | 05 | 11 | 11 |
| 6 | 06 | 12 | 12 |

| Week (Days) | Mark | |
|-------------|------|--|
| 1~7 | 1 | |
| 8~14 | 2 | |
| 15~21 | 3 | |
| 22~28 | 4 | |
| 29~31 | 5 | |

- 3) Except letters I and O, revision number will be showen on lot mark and following letters A to Z.
- 4) The location of the lot mark is on the back of the display shown in Fig. 12.3.

Fig 12.3
